FLAGSHIP HIGH-SECURITY PERIMETER SYSTEM

SECUROMESH® APEX

Engineered for sites that cannot afford a breach.

PROVEN UNDER ATTACK

FORTIFIED INFILL
fills every vertical

CUT-RESISTANT CORE
blunts grinder discs and saw blades

100+ MIN to breach **APEX FORTIFIED** with an industrial diamond-blade angle grinder. A reciprocating saw could not penetrate it.

9.7 t **CSIR-tested:** a half-metre-wide section of APEX mesh held 9.7 tonnes, about the weight of seven cars, before it failed.

250 kg per FORTIFIED panel (180 kg standard). Heavy, security-bolted and impractical to steal.

Independent attack test, April 2025 (breach = 200 × 200 mm opening). CSIR tested: tensile test to destruction, Aug 2025. Panel weights approximate; vary with height.

CHOOSE YOUR LEVEL

One system. Two levels of protection.

Not every site needs APEX. We match the level of protection to your risk and budget, from ParkMesh to APEX FORTIFIED.

HIGH SECURITY

APEX

Reinforced steel frame and 358 high-security mesh in one heavy, rigid panel.

- Very hard to grip, climb or cut with hand tools
- Concealed security fixings resist tampering
- **Fortify-ready:** add the infill to an installed fence at any time

MAXIMUM SECURITY

APEX FORTIFIED

Everything in APEX, plus Fortified Infill inside every vertical.

- Proprietary infill, specifically developed for APEX
- Dulls grinder discs and saw blades on contact
- Maximum delay, giving your response team time to act

Fortified Fencing

HEIGHTS	PANEL WIDTHS	MESH	FINISH	OPTIONS
3.0, 3.5 or 4.0 m	2.5 to 3.0 m	358 high-security 76.2 × 12.7 mm	HD galvanised, then 400–650 µm thermoplastic coat	Underdig, spike or razor topping, electric fence, wireless sensor alarm

Book a site security assessment

Tell us about your site and we will recommend the right level of protection.
